Who is the AIM Services security Team?

Meet the Aim Services Security Team! Three heroes who work together to help people and businesses protect their information from being stolen by bad guys.

Billy, Penny, and Danny work very hard to guard important **Digital Data** like passwords, files, banking documents, personal information, business secrets or anything else that is stored on a computer or in the cloud and keep it protected and safe!

How do they Help?

The Security Team is a special part of AIM Services!
We help companies figure out where they have **Risk**, like if their employees don't know all the security rules or they need to use better passwords. When our team finds a **Risk**, we use our tools to help fix it and **Protect** the company from being hacked or robbed by bad guys and losing their valuable digital data.

**Billy the Bull loves to fish
But bad guys go 'phishing' too
If you give your information away
Then the fish they might catch is you!**

**COLOR BILLY ON
THE NEXT PAGE!**

**Penny the Pachyderm remembers things
Like passwords and logins and numbers in strings
So don't write your passwords and logins down
Because bad guys know that's where they can be found!**

**COLOR PENNY ON

**Danny Dalmatian never takes a vacation
He searches the Dark Web with determination
He's on the hunt for your information
And when he finds it, he barks in celebration!**
